

Does your child experience migraine headaches?

If the answer to this question is yes, and your child is 12–17 years of age, and experiences two or more migraine headaches a month, he or she may be eligible to join a clinical research study looking at an investigational treatment for migraine headaches.

The study will involve 3–4 visits to our clinic. Your child would be given a nasal spray containing study medication to take when a migraine headache occurs. For more information, please contact:
